Dura Trac® Swine Flooring

PLASTIC COATED ANIMAL PRODUCTS SINCE 1974

DURA TRAC SWINE FLOORING

DURABILITY • TRACTION

DURAbility You Can Count On

All Dura Trac flooring is specifically designed to keep animals warm, dry, and comfortable. Profitability and animal health go hand in hand, and animals are healthier when these conditions are met. The mesh allows most of the fecal matter to fall through onto the floor below, which can easily and efficiently be cleaned to eliminate bacteria buildup.

Dura Trac flooring is completely plastisol coated to conserve the animal's body temperature and reduce stress caused by cuts and bruises.

Flooring You Can Trust

Since 1974, ADA Enterprises has been leading the agriculture industry with quality products made to increase production, thereby increasing your bottom line. We believe that animal health and safety is vital for a profitable swine operation. The quality of our products and our customer service are second to none, which is evident by our many loyal and long-term customers. Dura Trac flooring is designed and built for your specific needs. Whether remodeling or building new, we have a floor solution for you. Our friendly and knowledgeable sales staff will work with you to design a flooring system specific to your needs.

Our staff understands the importance of customer satisfaction.

Our knowledgeable and professional staff can design the floors to your needs. From start to finish our focus is on quality design and quality products. Dura Trac sets the standard in quality animal flooring.

A Proven Process

Dura Trac flooring is 100% plastisol (PVC) coated with no exposed steel, therefore rust will not permeate through the coating. The process we use starts with prime steel. After cleaning and priming the welded floor, it is preheated to prepare a surface perfect for accepting the PVC coating. The steel is then fully immersed into the liquid plastisol. Finally, the coated floor is oven cured for an extended time at high temperatures. The oven cured surface is smoother and more resistant to bacterial and fungal growth than other floorings. Uniform curing creates stronger adhesion to the metal for a tougher surface with greater wear resistance. The strong Dura Trac flooring has been proven to aid traction and reduce floor related injuries and is USDA accepted.

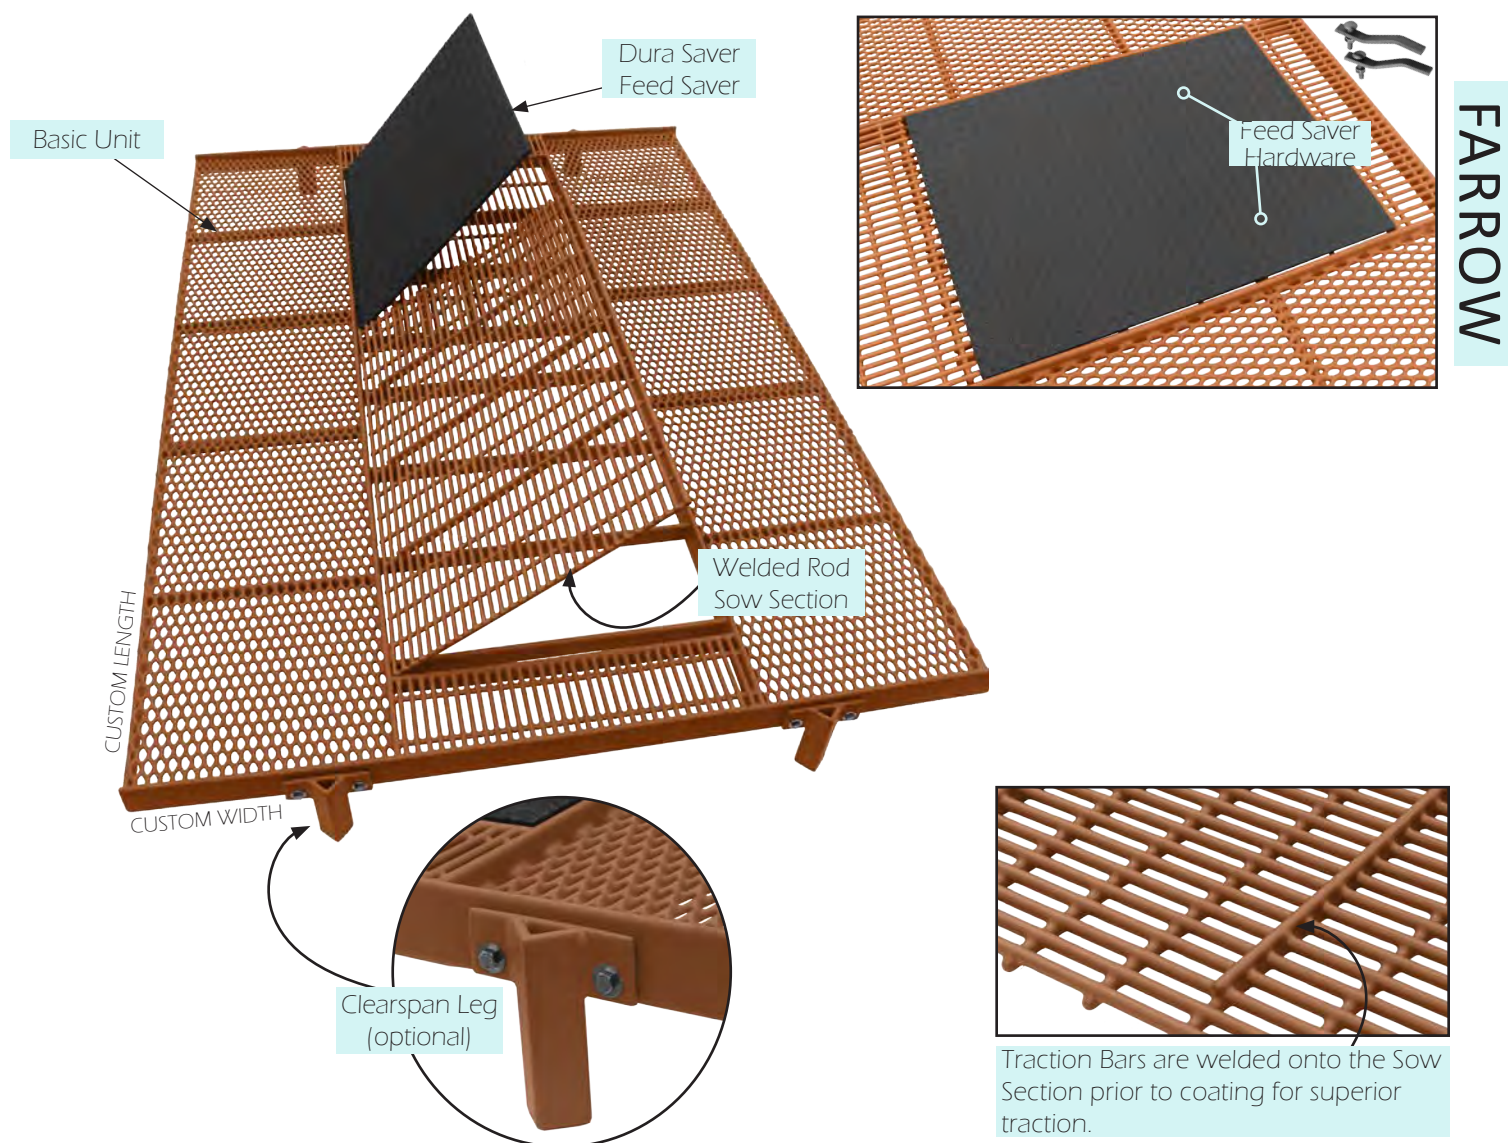

Dura Trac plastic coated steel flooring is manufactured to customer specifications and custom built to the size needed.

DURA TRAC CLEARSPAN FARROW COMPLETE

Setting the Standard

Dura Trac is setting the standard in quality animal flooring! All Dura Trac floors are completely plastisol (PVC) coated to conserve the pig's body temperature. Designed for traction, Dura Trac floors will actually reduce floor related injuries. The floors are easy and efficient to clean, eliminating bacteria buildup.

The Dura Trac Clearspan Farrow Basic Unit Complete

- Includes Basic Unit, Welded Rod Sow Section with Traction Bars, Dura Saver Feed Saver, and Dura Saver Hardware
 - Completely self supported; no additional support is necessary
- Two level construction - 1" center rise reduces crushing and allows newborns easier access to underside nipples
- 24" wide center sow area with traction bars - wide enough for sow but not so wide to lose advantage of raised center
 - Wear areas are kept small and replaceable for minimal maintenance cost

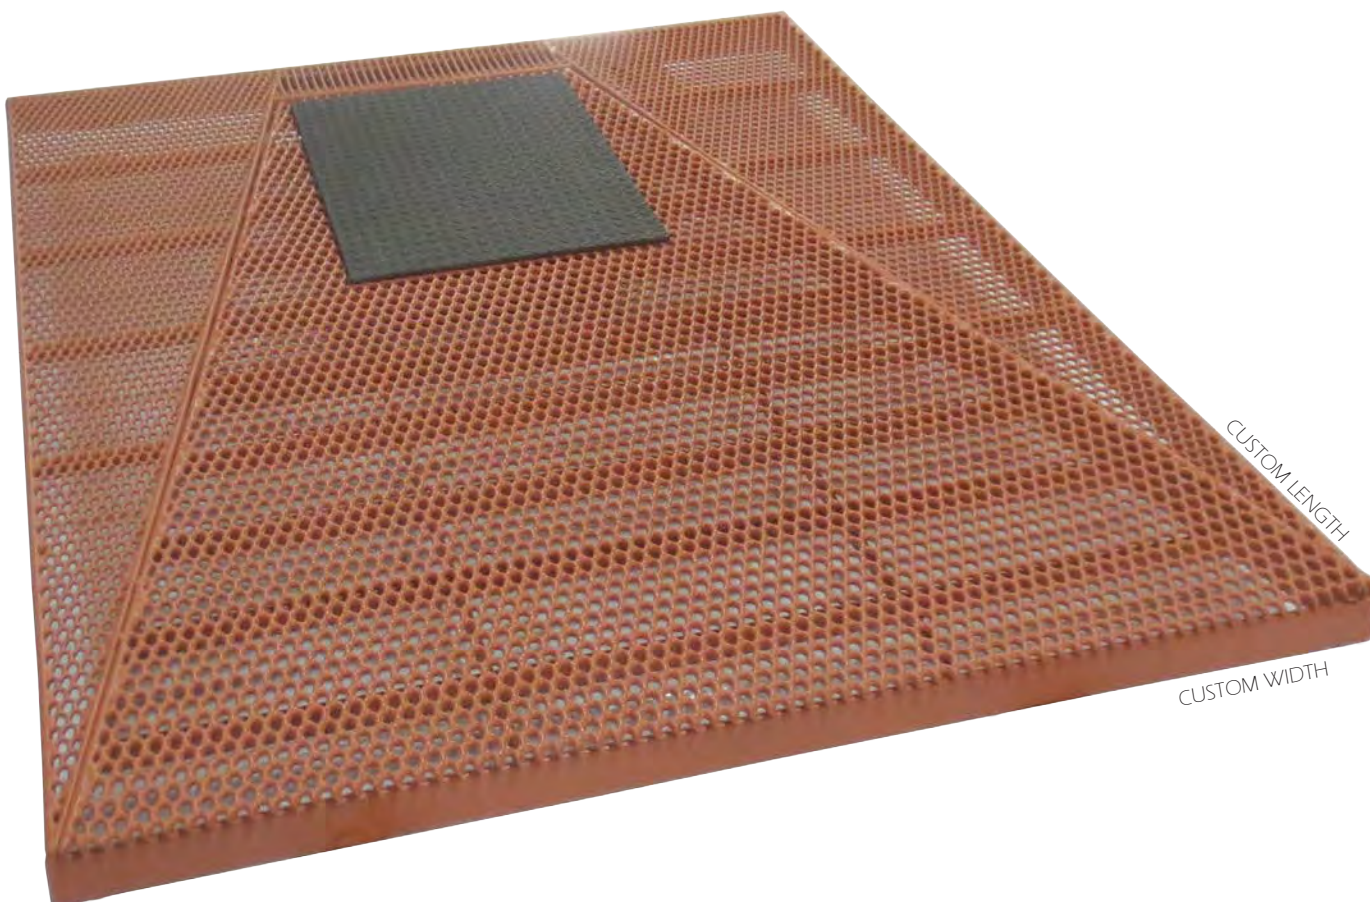

DURA TRAC CLEARSPAN TURN-AROUND FARROW

Healthy Sows + Increased Weaning Weights = Larger Profit

New for Turn-Around Crates!

The Clearspan Turn-Around Farrow is designed with a replaceable 'V' shaped center of durable, completely PVC coated, expanded metal. Dura Trac Clearspan Farrow flooring designed for turn-around crates is similar to the Dura Trac Clearspan Farrow Complete, which has been a customer favorite for years. The Clearspan Turn-Around Farrow floor is completely self supported. No additional support is necessary. Custom built to your size requirements.

FARROW

Profitability and animal health go hand in hand.

Healthy sows and increased weaning weights will boost profitability.

Dura Trac flooring is #1 for animal comfort and cleanliness.

DURA TRAC CLEARSPAN CREEP SIDES

With Cast Iron Center

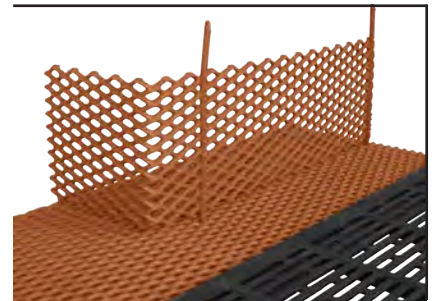

Dura Trac for Healthy Sows and Piglets

The Dura Trac Clearspan Creep Side and Cast Iron Center is specifically designed to promote animal health and comfort. The Creep Side flooring keeps piglets warm and dry. The durable cast iron center keeps the sow cool and comfortable. The mesh of the plastisol coated metal flooring allows most of the fecal matter to fall through onto the floor below, which can be easily cleaned to eliminate bacteria buildup. Convenient options such as heat plates, notches, pad positioners, mounting tabs, and feet are available to modify the Clearspan Creep Side floor to meet your needs and size requirements. All Dura Trac flooring is completely plastisol (PVC) coated.

FARROW

Split Suckling Divider

The completely coated divider separates the larger piglets from the smaller so that they are given a chance at nursing. After they have finished, simply lift the divider out of the way so the larger piglets are able to nurse. The purpose is to decrease the mortality rate and even out the size of the piglets in a litter. No hardware necessary.

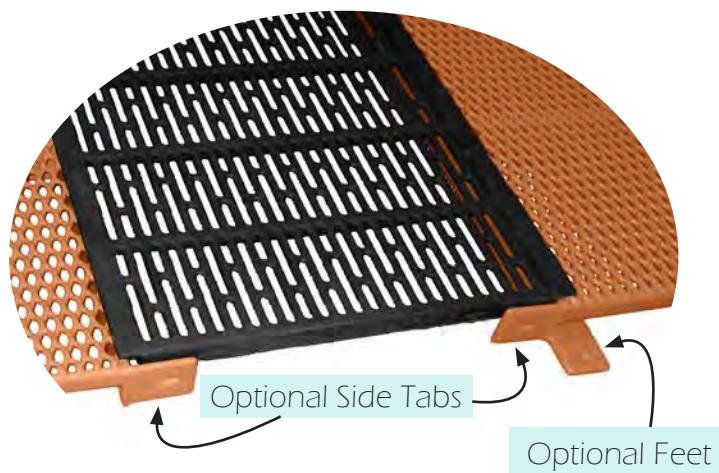

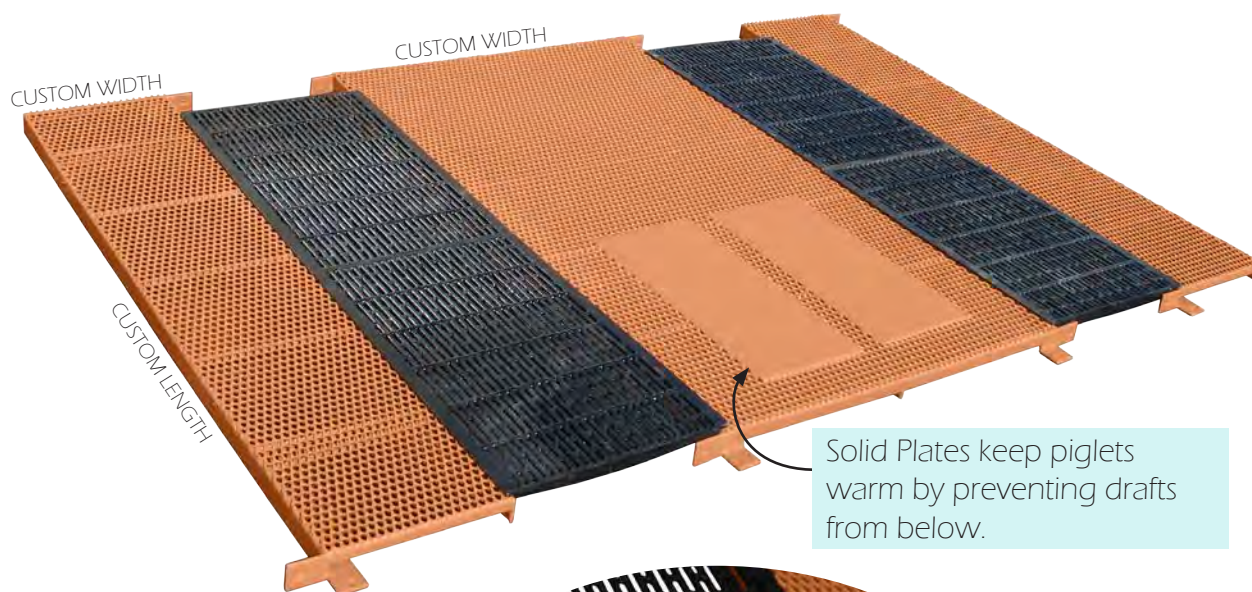

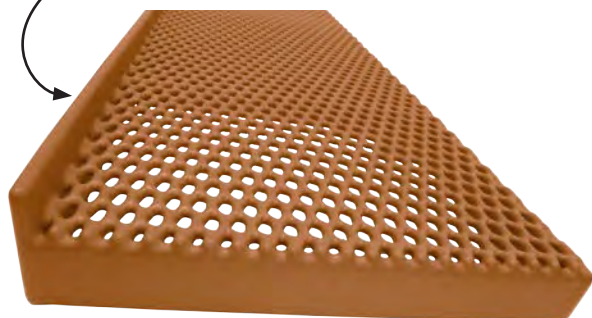

DURA TRAC CLEARSPAN CREEP SIDES

Options and Advantages

FARROW

Optional lip necessary for some cast iron and also to raise the sow higher.

Advantages of the Clearspan Creep Side with Cast Iron Center

- Completely self supported
- Cast Iron Center is cool and durable for sow comfort while piglets stay warm and dry
 - Convenient options to customize the floor to your needs
 - Easy, efficient installation

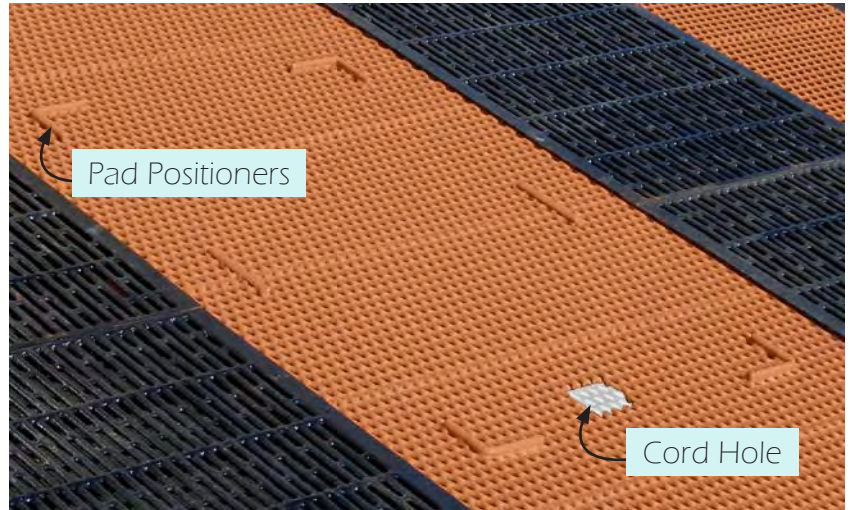

DURA TRAC CLEARSPAN CREEP SIDES

Customize Your Floors

Convenient Options

Pad Positioners are an inexpensive way to help secure the heat mat and lessen the likelihood of a sow kicking the heat mat out. Cord Holes can be cut in the flooring to allow heat mat cords to exit the crate with minimum exposure to the pigs.

FARROW

Cast Iron Center

Keep the sow cool and comfortable on a cast iron center. Pictured are two custom-sized Dura Trac Clearspan Creep Sides with the cast iron center. Cast iron sizes available are 24"x42", and 24"x48".

Modify the Creep Sides to meet the needs of the sow and piglets.

DURA TRAC CLEARSPAN CREEP SIDES

Built to Meet Your Requirements

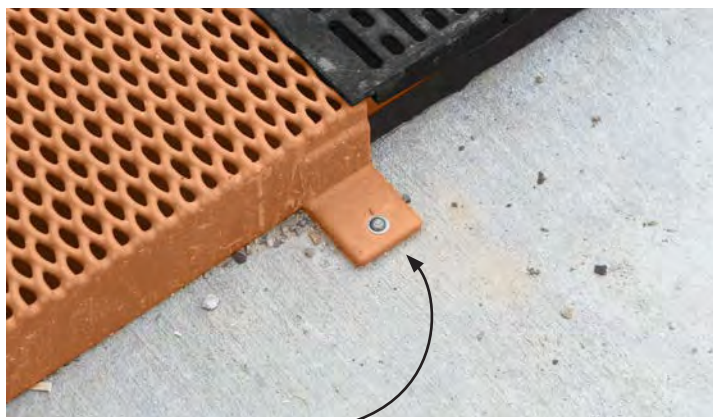

Shown below is new building construction after the installation of Dura Trac Clearspan Creep Side flooring. All floors are built to the customer's size constraints.

FARROW

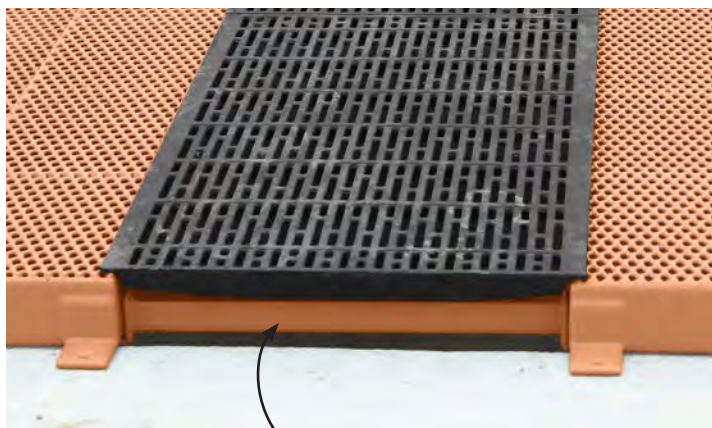

Farrowing Barn Construction

The creep area shown above has a modified area for the customer's heat mat. The area is dropped down slightly less than flush so the piglets will have easy access to the heat mat but the sow is not able to kick it.

Tabs to easily fasten creep side to concrete surface.

The optional Creep Bar holds the creep sides at a specified distance from each other to keep the cast iron in position. It is also helpful in spacing the creep sides during installation.

DURA TRAC CLEARSPAN CREEP SIDES

Designed to Promote Healthy Growth

FARROW

Hot Water Heat Plate

The Dura Trac Hot Water Heat Plate is used in the creep area so the piglets stay warm with uniform heat. It is flush mounted for more durability. Standard sizes are 1' x 4' and 2' x 4'. Custom manufactured to fit most existing installations.

From a loyal Dura Trac customer:

Dear ADA Enterprises, Inc.,

Kelly Farms has 1500 sows and has had Dura Trac flooring from ADA Enterprises under the creep areas in our farrowing crates for 21 years. We found your flooring to be simple and quick to install. We have been more than satisfied with its strength and durability. We have never needed to worry about flooring collapse or failure. We have found your flooring to be easy to clean, easy to inspect for cleanliness and gentle on the piglets. Healthy growth in our piglets has been aided by never having a problem with traction while nursing, nor loss of body temp to the plastic coated steel flooring that can occur in other types of flooring. We have two types of flooring for our weaned pigs up to 70 pounds. We have Dura Trac flooring from ADA Enterprises and we have a clip together type of molded plastic flooring. The weaned pigs on the Dura Trac flooring consistently do better than the others. The difference, we believe, is the ability to more thoroughly clean the flooring from ADA. This flooring is also 21 years old.

Sincerely,
Sandra and Doug Redekop

DURA BILT PORK LIFT

Reduce Lost Time Due to Injuries → Increase Morale

2000 Pound Capacity

Benefits

- Economically priced - put one in every farrowing barn. Eliminates the biosecurity issues associated with sharing machinery.
- Reduces lost time due to injuries. Insurance company rebates are available in some areas.
- Easily paid for with the savings from one back injury.
- Increases profits by moving splayed hogs to an area where proper care can be taken.
- Moves anything. Easily hauls heavy bags or pails around the barn with better stability.
- Increases morale. Keeps employees happy and improves long-term retention.

Features

- Heavy duty powder coated steel construction designed for long life
- Extra wide, industrial swivel casters that provide for tight cornering and easy maneuvering with heavy loads
- Foam filled flat-proof 10" fixed wheels for maneuverability on less than perfect surface
- Power up/down heavy duty marine grade winch with 2000 lb. capacity
- Comes complete with Interstate battery, trickle charger, two chains for anchoring the cart and one chain for wrapping around the sow

LEAN FLOORING KIT

Remodel Without Lost Time

LEAN KIT

A Delivery System Kit

There is no reason that farrowing barn renovations have to force producers to miss weeks of production. The use of Dura Trac flooring with the “kitted” delivery system is derived from Lean Manufacturing principles similar to what we use in our factory. This photo shows a complete row for a farrowing room that will roll through a walk-in door and down the aisle. This “Lean” Flooring Kit system was recently used by a seven man crew, and they were able to completely renovate 32 farrowing rooms (24 crates per room) each in less than an eight hour day.

Thomas A. Stensrud, President/CEO

DURA TRAC ORIGINAL FARROW FLOORS

Great for New Building and Replacement

FARROW

Benefits of Original Flooring

The Original floor is made to use with your supports.*
It works great for new building and replacement flooring.

CUSTOM LENGTHS AND
CUSTOM WIDTHS

unsupported expanded metal

unsupported welded rod

Custom options such as perimeter rod, notching, and holes are available. A Dura Saver feed saver bolts on easily. Available in expanded metal and welded rod. All floors are coated with plastisol after cutting - no exposed metal.

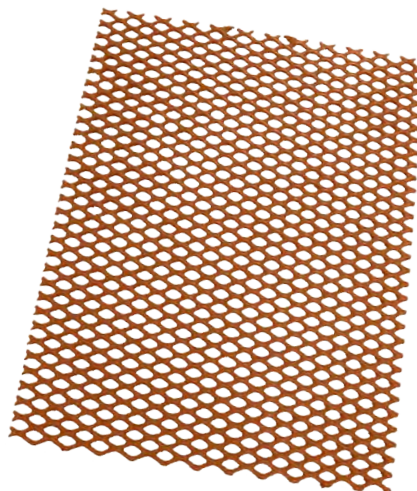

* Proper Support for Original Dura Trac Floors

Supports must run laterally across the short way of the opening. The following minimum requirements apply:

- All Farrowing floors - 8 inches apart under the sow and 16 inches apart in the creep areas
- All Nursery floors - 16 inches apart
- Finishing expanded - 16 inches apart

Dura Patch Piece

This 30" x 24" coated expanded metal section will cover holes in most types of existing floors that are beginning to show wear. No sharp edges! Just bolt down over the damaged area.

DURA TRAC NURSERY FLOORING

Installation is Quick and Easy

Custom Flooring

The Dura Trac Clearspan Nursery flooring can be ordered in sizes up to 12 feet long (with a limited width) and will support pigs up to 100 pounds each. Maximum size of a Clearspan Nursery floor is 6 ft x 10 ft. The floors are available in welded rod and expanded metal. The floors are completely coated - *no exposed metal*.

Contractors familiar with Dura Trac flooring tell us that our Clearspan Nursery floors install more than seven times faster than clip together hard plastic flooring. The photo shows a new barn being constructed with Dura Trac flooring. Construction can continue after Dura Trac flooring is in place. Note the scaffold used by the construction crew on top of the flooring.

NURSERY

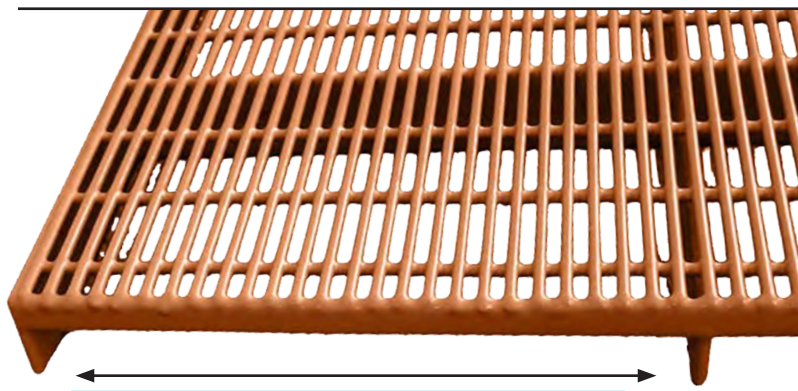

DURA TRAC CLEARSPAN NURSERY

Promoting Healthy Pigs Through Design

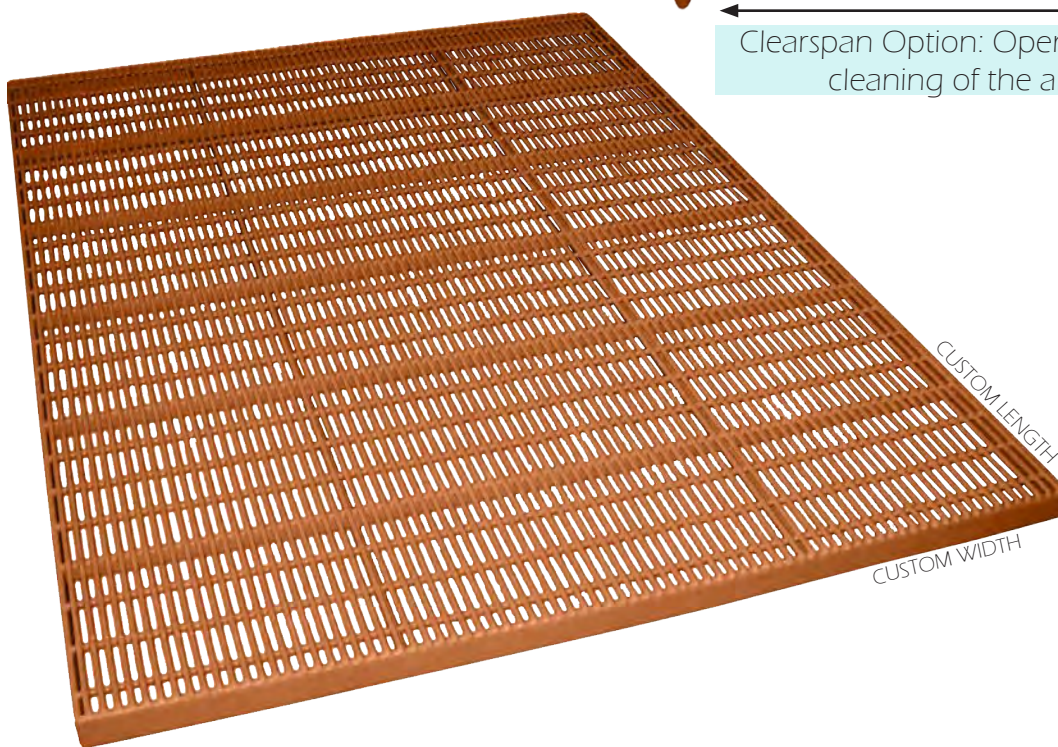

Reach Market Weight Sooner

Because of the 1/8+ inch of plastisol coating, the Dura Trac Nursery floors stay warm and dry which helps in conserving the body temperature of the pigs. The floors are designed for traction, therefore reducing floor related injuries. Your pigs will reach market weight sooner if they are in a safe and healthy environment. Dura Trac flooring provides the surface they need to grow and thrive.

The Clearspan Nursery floor is completely self supported in all directions and no additional support is required. The frame and floor are welded together and completely plastisol (PVC) coated to prevent rust and corrosion.

Clearspan Option: Open end for easy cleaning of the alleyway

NURSERY

Dura = Durable!

Dura Trac flooring is designed and built for your specific needs. Whether remodeling or building new, we have a floor solution for you. Our friendly and knowledgeable sales staff will work with you to design a flooring system specific to your needs.

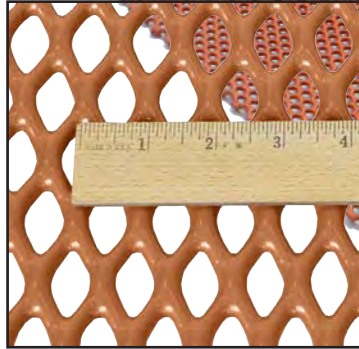

DURA TRAC ORIGINAL NURSERY FLOORS

For the Prevention of Floor Related Injuries

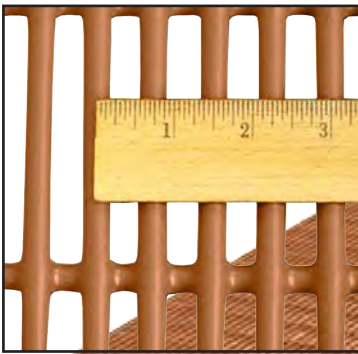

Dura Trac Original Flooring is built to use the customer's supports.*

Perfect for both new building and replacement in existing building.

CUSTOM LENGTHS AND CUSTOM WIDTHS

Options for the Dura Trac Original Nursery Floor include perimeter rod, notching, and holes.

NURSERY

* Proper Support for Original Dura Trac Floors

Supports must run laterally across the short way of the opening. The following minimum requirements apply:

- All Farrowing floors - 8 inches apart under the sow and 16 inches apart in the creep areas
- All Nursery floors - 16 inches apart
- Finishing expanded - 16 inches apart
